PROFESSIONAL SUMMARY

Backend Software Engineer with 5+ years of experience, mostly in fintech, specialized in Node.js, NestJS, TypeScript, PostgreSQL, Redis and AWS. I work on the architecture and evolution of microservices, REST APIs, asynchronous processing (SQS, BullMQ) and system integrations (RPA, SFTP, CRM, financial partners). Recent results include cutting the processing time of the Molicar dataset from ~7 hours to 10 minutes and automating the operations desk, which eliminated ~60% of the manual work. Experience with observability, automated testing and architecture standardization, working closely with the operations and business teams.

TECHNICAL SKILLS

Back-end: Node.js, NestJS, Express.js, TypeScript, JavaScript, Java, Spring Boot, REST APIs, Microservices Architecture

Databases: PostgreSQL, MySQL, MariaDB, MongoDB, Oracle, Redis, Amazon DynamoDB, TypeORM, Prisma

Messaging & Integrations: AWS SQS, BullMQ, RabbitMQ, RPA, SFTP, CRM, partner and external API integrations

Cloud & DevOps: AWS (SQS, S3, DynamoDB), Azure, Docker, Git, GitHub, GitLab, CI/CD, Grafana, observability

Testing: Jest, unit, integration and e2e tests

Front-end: React, Next.js, Angular

Methodologies: Scrum

PROFESSIONAL EXPERIENCE

Backend Software Engineer - Teddy Open Finance | **07/2024 - 09/2026**

Open Finance fintech | São Paulo, SP (Remote)

Project: Consórcios (Conkey)

- Developed and evolved the consórcio ecosystem (consórcio: Brazilian group purchase plans), building microservices, REST APIs and integrations for the simulation and proposal flows.
- Designed and built the base boilerplate for the squad's microservices, standardizing structure, configuration and architecture patterns and reducing the effort to create new services.
- Built microservices with Node.js, NestJS and TypeScript, using AWS SQS and Redis for asynchronous processing, decoupling and service-to-service communication.
- Implemented integrations and automations with RPA, SFTP, CRM and external partners, with persistence in PostgreSQL/TypeORM and AWS services.
- Automated operations desk processes for simulation and proposals, reducing manual work by ~60% and contributing to ~40% growth in the product's profit.
- Wrote unit, integration and e2e tests with Jest, ensuring the reliability of the simulation, proposal and integration flows.

Project: Movix - Vehicle Financing and Refinancing

- Took part in creating the vehicle refinancing product, defining the architecture, microservices structure, business rules and integrations with financial partners.
- Evolved the vehicle financing flows and the integrations of the Movix ecosystem.
- Optimized the processing of the Molicar dataset, cutting the run time from ~7 hours to 10 minutes (~97% reduction).
- Restructured asynchronous processing with BullMQ and Redis and built a queue monitoring dashboard, allowing operations to follow jobs and run manual reprocessing.
- Implemented observability and traceability, logging failed requests in Amazon DynamoDB for debugging, investigation and support in reprocessing operations.

Technologies: Node.js, NestJS, TypeScript, TypeORM, PostgreSQL, Redis, BullMQ, Amazon DynamoDB, AWS SQS, AWS S3, Docker, Jest, RPA, SFTP, MongoDB, Angular, Git, Grafana

Mid-level Software Developer | Full-stack - Think:AI | **03/2024 - 05/2024**

Temporary contract | São Paulo, SP (Remote)

- Built landing pages and web applications with Node.js, TypeScript, React and Angular, focused on SEO, performance and user experience.
- Implemented new features on a dubbing platform and supported the maintenance and evolution of the applications.

Technologies: Node.js, TypeScript, React, Angular, SEO.

Mid-level Software Developer | Full-stack - Sistematech Informática | **02/2023 - 02/2024**

- Helped build a route and vehicle flow management system with Java, Spring Boot and Angular, integrating the Google Maps API for route control and operational tracking.
- Maintained and optimized corporate systems, delivering new features and performance improvements with PostgreSQL, Oracle, Azure and Docker.

Technologies: Java, Spring Boot, Angular, Google Maps API, PostgreSQL, Oracle, Azure, Docker.

Junior Software Developer | Full-stack - Ali Crédito | **07/2021 - 01/2023**

Fintech | São Paulo, SP (Remote)

- Took part in developing the Back Office portal for payroll-deducted loans, helping evolve the fintech's operational processes.
- Built an automation for financial report generation and evolved internal Human Resources and Customer Service portals.

Technologies: Node.js, NestJS, TypeScript, React, relational and NoSQL databases, Prisma, Jest, Docker, Azure.

EDUCATION

Systems Analysis and Development - Faculdade Impacta Tecnologia (2023)

Junior Java Developer Bootcamp - Generation Brasil (2021)
